

Energy Surveys provide a full design service which takes the client from **“Conception to Completion”** with the same standard of personal and professional attention given to all clients from the smallest domestic extension to the largest commercial buildings. We specialise in providing economic, well designed buildings which guarantee sound technical performance within the restraints specified by the Client.

This service includes:

-  Full survey and plans prepared for Planning Permission.
-  Provisional BER at design stage to allow for correct cost analysis of the project.
-  Site engineering/ Site Supervision so that standards are maintained on site.
-  Air Tightness Testing at first fix stage (it is very easy to rectify any air leakage before the plastering is done)
-  Thermal Imaging. This identifies any defects in the building which are allowing needless heat loss.
-  Air Tightness Testing at Completion stage. At this stage we can issue certified results for the building.
-  Final Building Energy Rating. At this stage the client has a fully supervised and certified building guaranteeing huge energy saving for the life of the building.
